

## **SUMMARY**

Experienced 2.5+ year Front-End Engineer with a track record of handling tasks of varying complexity. Strongly motivated to learn, grow and excel as an engineer, team player and leader. Open-minded, collaborative, responsible, and goal-oriented mindset.

### **Technical Skills:**

JavaScript, React, React Native, React Hooks, Next.js, Express.js, Node.js, Tailwind, Styled Components, HTML5, CSS3, MongoDB.

## **WORK EXPERIENCE**

**Studio.gd**, Paris, France

Front-End Engineer, December 2020 – Present

Fastfood points collection platform for Web and Mobile Devices (Next.js, React-Native)

- Initialised and planned the Front-End architecture of the web application part, which resulted in a structured team workflow and higher velocity in the project's progress.
- Abstract API handling logic into separate package which allowed team members to reduce code boilerplate and speed development up to meet strict deadline.
- Extracted and described common components based on the design to be able to reuse them among web Next.js application and mobile React-Native app.

Online shop 50k+ items (Next.js, Redux, Redux Toolkit, Tailwind, Playwright)

- Implemented existing API to render FAQ section with nested pages, allowing users to get high-precise categorized answers to specific questions regarding shopping on that platform.
- Designed and implemented SEO strategies, resulting in a higher 60% SEO score for user acquisition.

Company's product - digital signage system for displaying and managing media content

- Split content rendering system to separate app using server-side events, which immediately increased the speed of displaying content changes by 60%.
- Created mockups and implemented an intuitive, responsive user interface which followed in higher user interactivity and overall user experience on the platform.
- Conducted A/B testing to identify and fix bugs and provided suggestions for UI improvements.

Corporate websites on CMS (WordPress, Drupal, Custom Themes)

- Participated in the entire lifecycle from drafting a technical specification to releasing in production and everything in between, which resulted in 4 successfully launched applications into the production environment.
- Communicated with a client directly to gather requirements and propose the best technical solution.

### **Personal projects**

Full-Stack Engineer, June 2022 – Present

Portfolio

- Designed and built website, admin, and backend for my portfolio. It includes UI/UX design prototyping in Figma, planning system architecture, and picking up web technology accordingly.

## **EDUCATION**
